Task 8

Under address

https://www.fuw.edu.pl/~werner/files/englishWords.txt

you can find a list of roughly 110 thousand English words. You can download this data or use it from within the program to find and print list of words which are anagrams — only the one with the maximum length. The program should be very short thanks to stream processing (*java.util.stream*) — solution can be expressed, including printing, by one pipeline of operations.

For the data as above, the result should be:

```
[apers, apres, asper, pares, parse, pears, rapes, reaps, spare, spear]
```

Deadline: Dec 18 (inclusive)
